

Project Management Occupational Outlook

Project management is an essential element of operations in today's advancing, team-based business industries, and project management training allow professionals to plan, execute, and coordinate a variety of projects. Project management programs give candidates fundamental skills in using methodology and processes to reach goals and complete tasks. The basis of most project management education program is based on a scientific and step-by-step process. From assessing risks to implementing a new process, project managers work hard to ensure projects are coordinated and executed with efficiency.

What Is Project Management?

Project management is the use of specific skills and methodology to accomplish a goal. The basic skills can be applied to a variety of industries including corporates and businesses in the following fields:

- Automotive
- Engineering
- Information Technology
- Telecommunications
- Aerospace
- Business Management and Operations
- Pharmaceuticals
- Technology Development
- Financial Services
- Healthcare
- Construction

Many people assume that project managers are only used in the information technology sector or in the construction industry. However, the core principles learnt in a project management course can be applied to a variety of disciplines, offering flexibility in job options and ability to grow and learn a variety of attractive project management careers.

Project Management Careers and Job Responsibilities

Project management careers are generally pursued at the management level. Every industry that requires planning, execution, control or supervision of team members, and closing of the project is overseen by an assigned project manager. Each industry offers a number of opportunities for project managers, with special skills and experience needed for upper-level positions. A few common project management career options and positions include:

- Project Engineer
- Construction Project Manager
- Web Development Team Manager
- Financial Director
- Programme Office Analyst
- Project Support Officer
- Project Co-ordinators
- Business Analyst
- Quality Assurance
- Head of Projects
- Senior Project Manager
- Project Manager
- Assistant Project Manager
- Consultant Project Manager
- Delivery Manager
- Implementation Leader/Manager
- Project Leader
- Stage Manager
- Work Package Manager
- Automotive Services Manager
- Internet or Tech Project Manager

Along with critical thinking, data collection, timeline forecasting, and results analysis, a project manager is involved with initiating a project, planning a timeline, executing tasks, controlling work teams or processes, and closing the project. More and more organisations are looking for highly skilled professionals in this area, especially those with excellent communication skills and the ability to lead large groups of teams. Project management training allow candidates to explore innovative ways to overcome problems in business and beyond, implementing effective processes and procedures and documenting their results.

Earning Potential and Employment Prospects

Employment prospects look promising for project managers, especially those that specialise within the fields of business, information technology, engineering, and knowledge management. These fields require professionals to lead, direct teams and coordinate a variety of projects; the role of general manager or director is most commonly assigned to those with a project management qualification, and salary ranges depend on industry, experience, and overall skill level of the candidate. The average annual salary of a general manager is £41,000, and positions are expected to increase faster than average through 2025.
