

Diploma in Database Developer (997) – Programming the Web using HTML & XML

Prerequisites: Basic knowledge of relational databases; for example, Access.	Corequisites: A pass or higher at Diploma level
<p>Course Description: HTML The course covers the basic principles of web page construction, editing and formatting HTML documents. Hypertext Markup Language (HTML) is the language that drives the World Wide Web. HTML is the core computer language used to create web pages. Candidates learn how HTML fits into the web design process, use HTML to format text, insert hyperlinks, place images, and organise pages with tables. The use of frames and forms to create more advanced web pages, make hyperlinks to other pages, make tables, build forms, embed and optimise images is also covered.</p> <p>XML Programming systems these days are using many different technologies and programming languages. XML is a modern effort employed to allow communication between all these different systems. The course introduces extensible Markup Language (XML) and covers the advantages of XML over HTML, the process of switching from HTML to XML specification process and production rules, including the most important XML concepts: well-formed and valid XML, DTD, Namespaces, XML DTDs, XSL tools and resources, XSL style sheets, and the future of XML.</p>	
Required Materials: Recommended Learning Resources.	Supplementary Materials: Lecture notes and tutor extra reading recommendations.
Special Requirements: This is a hands-on course, hence use of computers is mandatory.	
<p>Intended Learning Outcomes:</p> <p>HTML</p> <p>1 Describe how a browser displays a Web page. Explain what HTML is and how Web pages use HTML. Explore the structure of the World Wide Web. Learn the basic principles of Web documents. Develop a Basic Web Page.</p> <p>2 Describe how to add Hypertext Links to a Web Page. Define the types of hyperlinks. Add absolute URLs and relative URLs. Describe how to add named anchors. Discuss the problem of link maintenance.</p>	<p>Assessment Criteria:</p> <p>HTML</p> <p>1.1 Demonstrate how to create a HTML document</p> <p>1.2 Identify how to view a HTML file using a Web browser</p> <p>1.3 Identify how to use HTML tags for text, headings, paragraphs, and lists</p> <p>1.4 Learn to insert character tags into an HTML document</p> <p>1.5 Illustrate how to insert an inline graphic image into a HTML document</p> <p>1.6 Describe how to add special characters to an HTML document</p> <p>1.7 Demonstrate how to insert horizontal lines into an HTML document.</p> <p>2.1 Describe how to create hypertext links between elements within a Web page</p> <p>2.2 Describe how to create hypertext links between Web pages</p> <p>2.3 Review basic Web page structures</p> <p>2.4 Describe how to create hypertext links to Web pages on the Internet</p> <p>2.5 Distinguish between and be able to use absolute and relative pathnames</p> <p>2.6 Describe how to create hypertext links to various Internet resources, including FTP</p>

<p>3 Work with Fonts, Colors, and Graphics. Demonstrate how to add colors to a Web page. Explain how to add background patterns. Describe how to add images to a Web page. Explain the use of relative addresses for image files. Identify when to employ the GIF, JPEG, and PNG file formats.</p>	<p>servers and newsgroups.</p> <p>3.1 Demonstrate how HTML handles color</p> <p>3.2 Describe how to create a color scheme for a Web page</p> <p>3.3 Work with font sizes, colors, and types</p> <p>3.4 Demonstrate how to place a background image on a Web page</p> <p>3.5 Define colors for a Web page and for specific characters</p> <p>3.6 Analyse how to control the placement and appearance of images on a Web page</p> <p>3.7 Demonstrate working with client-side image maps</p>
<p>4 Design a Web Page with Tables. Describe the structure of HTML tables. Define table attributes. Describe how tables can be used to format text and graphics.</p>	<p>4.1 Demonstrate how to create a text table</p> <p>4.2 Describe how to create a table using the <code><table></code>, <code><tr></code>, and <code><td></code> tags</p> <p>4.3 Describe how to create table headers and captions</p> <p>4.4 Define how to control the appearance of a table and table text</p> <p>4.5 Describe how to create table cells that span several rows or columns</p> <p>4.6 Describe how to use nested tables to enhance page design</p>
<p>5 Demonstrate how to use Frames in a Web Site. Construct frame-based displays. Describe how frames can be used to facilitate Web site navigation.</p>	<p>5.1 Outline the process of creating frames for a Web site</p> <p>5.2 Describe how to control the appearance and placement of frames</p> <p>5.3 Describe how to control the behaviour of hyperlinks on a Web page with frames</p> <p>5.4 Use reserved target names to specify a target for a hypertext link</p> <p>5.5 Describe how to modify the appearance of frame borders</p> <p>5.6 Analyse how to create and implement floating frames.</p>
<p>6 Analyse Web Page Forms. Create forms. Outline the importance of forms as the only way users can interact with a site.</p>	<p>6.1 Learn about CGI scripts</p> <p>6.2 Review the various parts of an online form</p> <p>6.3 Describe how to create form elements</p> <p>6.4 Describe how to create a hidden field on a form</p> <p>6.5 Illustrate how to work with form attributes</p> <p>6.6 Learn how to send data from a form to a CGI script</p> <p>6.7 Learn how to send form information without using CGI scripts.</p>
<p>7 Describe Cascading Style Sheets</p>	<p>7.1 Learn about the history and theory of cascading style sheets</p> <p>7.2 Describe how to create inline styles, embedded styles, and style sheets</p> <p>7.3 Describe style precedence and style inheritance</p> <p>7.4 Demonstrate how to use cascading style</p>

	<p>7.5 Define document content with the class and id attributes and create styles for them</p> <p>7.6 Describe how to mark document content with the <div> and tags and create styles for them</p> <p>7.7 Describe how to use cascading styles to design page layout</p>
XML	XML
1 Describe XML and its use. Define the history and XML goals	1.1 Define XML 1.2 Describe the use of XML 1.3 Describe how to construct an XML document 1.4 Describe the advantages of XML 1.5 Define the differences between XML and HTML
2 Define XML documents. Create a simple XML page	2.1 Describe the components of an XML document 2.2 Describe XML elements 2.3 Describe XML attributes 2.4 Describe the structure and syntax of XML
3 Define XML Document Type Definition (DTD)	3.1 Describe DTDs 3.2 Describe DTD entities 3.3 Analyse DTD declarations 3.4 Define XML character notations 3.5 Define internal and extern DTDs
4 Define XML Schema. Analyse how to declare namespaces	4.1 Describe XML namespaces 4.2 Define simple-type elements 4.3 Define attribute names for namespace declaration 4.4 Describe how to apply namespace to elements and attributes 4.5 Describe namespace constraints
5 Demonstrate working with cascading style sheets	5.1 Learn about the history and theory of Cascading Style Sheets 5.2 Demonstrate linking a style sheet to an XML document 5.3 Design a page layout using styles
6. Demonstrate working with XSLT.	6.1 Learn about the history and theory of XSL 6.2 Demonstrate how to create an XSLT style sheet 6.3 Demonstrate the syntax of the XPath language 6.4 Be able to transform an XML document into an HTML file 6.5 Demonstrate creating templates to format sections of the XML document
7 Describe creating computational stylesheets	7.1 Define how to number nodes 7.2 Apply XPath functions such as count()

8. Analyse creating element groups.	7.3	and sum() Create formulas using mathematical operators
	7.4	Work with text nodes and white space
	7.5	Create variables and parameters
	8.1	Describe working with step patterns to create complex node sets
	8.2	Identify how to create model templates so that different code can be applied to the same nodes
9. Describe the document object model	8.3	Demonstrate accessing node sets using ID attributes and keys
	8.4	Demonstrate organising elements using Muenchian grouping
	8.5	Demonstrate accessing secondary source documents
	9.1	Learn about document object models
	9.2	Demonstrate how to create and load a document object
	9.3	Describe how to apply an XSLT transformation to a document
	9.4	Describe how to use JavaScript to modify the contents of an XML document
	9.5	Describe how to use a form to e-mail the contents of an XML document
	9.6	Demonstrate using JavaScript to modify the attribute values of a document element
	9.7	Illustrate using JavaScript to pass a value to a style sheet parameter
